## Instructions for use

### **Applications**

The Flood Alarm is a self contained electronic device that sounds an alarm when its sensor is in contact with water.

It operates on a 9 volt battery (included). The electronic horn alarm is set off immediately when the two exposed copper wire ends (at the sensor arm) contact the water or moisture. The sensor arm can be used in a straight or bent position depending on its application. Once the battery is placed in, the Flood Alarm is always in 'on' position. No adjustment is needed to operate this device.

The Flood Alarm can be used in a fixed position, as a portable device or a combination of both, by using the wall mounted bracket enclosed.
