Instructions for use

Applications

For sealing around door apertures and windows, pipes, ducts and general sealing to both inside and outside. Protects walls, apertures, floors and wood from water leaking into joints and causing expensive damage. Also draught-proofs casement windows and doors.

Used in conjunction with Flood Angel® product range, Airbrick, Flood Defender™ etc.

Directions for use

All surfaces must be clean, dry and dust and grease-free. Porous materials should be primed for optimum adhesion. When sealing deep joints use foam backer rods to minimise wastage. Cut the tip off the cartridge, screw on nozzle and cut at an angle of 45°. Apply using a standard sealant gun. The best tooling of the sealant will be achieved if 2-3 minutes lapse between gunning and tooling.
